Current Queue Management System in Aarong CS

- Queue systems running separately in Design, Merchandising, SCPD, QC, Finance, and Documentation with 4 machines, managed in a decentralized way.
- Producers face hassle moving across floors and re-entering multiple departments.
- No unified monitoring; queues remain disconnected.
- Appointment field exists in producer app but no integration for prior booking.
- Outsiders (vendors, producership seekers) rely on manual visitor passes, causing extra confusion and dependency on manual IDs with no tracking.
- Total Producer and supplier number is 1400+.

Solution

- A Central Queue Management hub.
- One system for Producers, Suppliers
- Unified flow for Producers, Suppliers
- Connected dashboards for all producer touchpoints.
- Integrated with Producer App for prior appointment and phone call booking for designated time slot.

Producer Touch points at CS-1
